## Assemblies ★

Full assemblies, including with components from different brands

- Ensure accuracy in tool setup, reducing the likelihood of errors during machining.
- Access detailed assembly drawings and 3D models for precise setup.

## Virtual workshop ★

User libraries for tools and assemblies, machines, workholdings,

- Manage and visualize machines, tools, and work holding in a virtual environment.
- Organize and optimize your workshop setup for maximum efficiency.

## Job planning ★

Plan and organize jobs with detailed tool data and recommendations.

- Save time on job setup with pre-configured tool parameters and cutting conditions.

## Products data ★

Get the latest and most comprehensive product data directly from manufacturers:

Properties, application recommendations, 3D models (STEP), 2D drawings (DXF),

## AI powered ★

Tool advisor, get tool recommendations based on the intended use.

Feeds and Speeds enhanced with AI (~90% coverage).

## Procurement

Prepare your orders directly in MachiningCloud and checkout with MSC

## Export ★

Export tool data and assemblies directly into your machining systems.

- Ensure data accuracy and consistency across platforms.
- Save time by eliminating manual data entry and reduce the risk of errors.

## Typical use cases

### Case 1: Finding a tool replacement

- Find the tool that needs replacing in MachiningCloud
- Go to the product page of that tool
- Select “View all similar items” at the bottom of the page
- Select a tool from the list of results
- Or use the filters on the right to narrow down your search

### Case 2: Finding a matching item

- Find the item you want to add the compatible item to in MachiningCloud
- Go to the product page of that item
- Select “Compatible items” at the bottom of the page
- Select one of the items from there
- Or create a new Tool Assembly to see all the compatible items

### Case 3: Using the Export Function

- If you see the Export icon not greyed out in MachiningCloud, export is available.
- Export is available for single items, assemblies, jobs, workholdings, and more.
- MachiningCloud currently supports export to 24 different partners.
- Import instructions are available once export has been selected.
- Request a new software once export has been selected if it's not available.

### Case 4: Create your own material

- Go to "My Workshop" from the home screen.
- Select "My Materials" from the top task bar.
- Select "New Material."
- Use the Classification Wizard.
- Alternatively, manually enter your material information.
